

{ Single Stamp Example }

Example shown is 4.3" x 2.1" which equals 9 square inches.
(This would be priced in the 10 square inch category.)

No margin required for single stamps. You can have some background (paper) around your image so that you do not risk clipping. Measure the design area only to determine total square inches, not the background paper size. (Do not include this outline in your image file for production).

Black outline represents the edge of the single stamp image file and approximately the rubber sheet. (Do not include this outline in your image file for production).
